## AMERICAN INDIAN and ALASKA NATIVE COMMUNITIES

### Summer Institute for Health Professionals and Paraprofessionals

#### What is the Summer Institute Training?

The training will include not only the latest research information on diabetes and related chronic diseases, but also how to apply the newest information in your daily practice. Courses will include a clinical update on diabetes treatment and prevention, skill building to promote behavior change, effective teaching strategies for different audiences, information technology and more...

#### Who Should Apply?

These courses are designed to meet the needs of professionals and paraprofessionals who work in diverse areas of American Indian and Alaska Native health care, from administrators to community health workers, physicians, nurses, registered dietitians, and program managers. Almost anyone who works in Indian health care and wants to take advantage of new skill-building opportunities would benefit from this training. All courses are designed to be hands-on and provide learning in an interactive environment. Skill building through actual practice and demonstration is an important part of each course.

#### Tuition

The total cost is \$300. Each attendee is allowed to sign-up for one to three courses.

#### Accommodations

Arrangements have been made at each location.

#### Sponsors

An Academic Partnership between the Indian Health Service Division of Diabetes Treatment and Prevention, Center for Disease Control Native American Wellness Program, IHS Nutrition and Dietetics Training Program, Native American Diabetes Program-University of New Mexico, and the Oregon Health & Science University.

Registration and logistical information to follow in February. Look for information on the IHS DDTP website: <http://www.ihs.gov/MedicalPrograms/Diabetes>
